Tested Action	Commit ID	Expected Output	Actual Output	Pass/Fail	Notes
Filling in the Contact form.	6abfaeec83a147be7b116d40287b4f11a03e550b	Information is processed and Outlook.	Information processed and opened Outlook.	Pass	N/A
The contact form won't submit without information	6abfaeec83a147be7b116d40287b4f11a03e550b	When leaving out information in the boxes, the Contact Form will refuse to submit.	Contact Form Refused to Submit.	Pass	N/A
Submit Button	6abfaeec83a147be7b116d40287b4f11a03e550b	After hitting submit, Outlook should open.	After pressing submit Outlook opened with the information inputted.	Pass	N/A
Cancel Button	6abfaeec83a147be7b116d40287b4f11a03e550b	The Cancel Button must erase the initial information.	The Cancel Button erased the Information.	Pass	N/A

Validation:

I used <https://validator.w3.org/> and <https://jigsaw.w3.org/css-validator/validator> to validate my code. I validated my code using the 'Direct Input' and would adjust the code according to the error listed, and which line the code was located.

When running the HTML Validation majority of the errors came from using line breaks in my code or having stray " and tags. Incorrect code also stems from my <img src="" ... which I had initially placed as a placeholder for images I may add or for certain buttons, and did not remove. It also detected my usage of space for image files I was using which was invalid, but I did not change.

My CSS validation was met with fewer errors and only consisted of 2 regarding the btn-primary and.abt-text .

Future Improvements:

In the future, I would like to create a better carousel since my initial one did not function the way I expected it to, since the buttons are bigger than they were originally, and although I went to fix them in CSS, I did not succeed. Next time, it would be better if I had further analysed the issue by checking if the Bootstrap CSS had any similarities to how I named my buttons in my CSS. I would have liked to validate my code more often, especially since most of my mistakes were repetitive and small, which could have led to bigger issues.

I should also refrain from naming my files with spaces, since the HTML validator has corrected me a couple of times on that specifically. I would also like to structure the website a little better and make use of grids to help me build it better, creating more structured content.
